

BONA DEEP CLEAN SOLUTION

Bona Deep Clean Solution is a concentrated cleaner for thorough, deep cleaning of coated and oiled wooden floors. The unique formula delivers optimal cleaning efficiency and removes stubborn scuff marks without risk of staining the wood. Use it to revitalize dull finished wooden floors or to prepare the surface before applying maintenance oil. It is particularly suited for the Bona PowerScrubber but can be used with scrubber driers. It may also be used for manual cleaning.

- Revitalizes dull, dirty floors
- Dissolves deeply ingrained dirt and stubborn scuff marks
- Safe and extremely effective
- Optimized for Bona PowerScrubber

Technical data

pH-value:	Concentrate approx. 12.5 Working solution: 11
Dilution:	Coated floors - 1 litre to 9 litres of water Oiled floors - 0.5 litre to 9.5 litre of water
Safety:	Irritant – see SDS for further information
Shelf life:	At least 2 years, from the date of production, in unopened original container
Storage / transport:	Store frost free.
Pack size:	5 litre

Preparations

Vacuum thoroughly to remove dust and loose grit from the floor. Dilute Deep Clean Solution to the correct strength with water, depending on the surface about to be cleaned. Bona Deep Clean Solution is optimized for use with the Bona PowerScrubber but may also be used manually or with other cleaning machines. For use of Bona Deep Clean Solution with other machines, see the manufacturer's instructions.

NB: After deep cleaning an oiled floor, a maintenance oil application is required.

Application

Cleaning with Bona PowerScrubber

1. Fill $\frac{2}{3}$ of the upper tank with clean, lukewarm water. Add Bona Deep Clean Solution as required (1 litre for varnished floors, 0.5 litre for oiled) and fill up with more water until tank is full.
2. Set the machine to medium pressure and run the machine forwards along a straight path. Distribute detergent on your forward pass.
3. Return to your original position following the same path without distributing detergent, unless the floor is heavily soiled when detergent should continue to be dispensed.

Australian datasheet only – Jan 2023

4. Do not allow excess solution to pool on the wood floor. Immediately wipe off spills or areas where the machine has missed with a mop.

5. Continue cleaning in a new path until the whole floor has been cleaned.

Semi-manual cleaning with buffing machine

1. Apply diluted Bona Deep Clean Solution to a small section of the floor and allow it 3 minutes to dissolve the dirt. Be moderate with the application if the floor has open gaps.

2. Scrub the wet section using a standard speed buffing machine. On coated floors use nothing coarser than a red pad whereas on oil nothing coarser than a brown pad can be used. Start using the mildest pad as possible and increase gradually as necessary.

3. Wipe off the dissolved dirt immediately using a mop. Rinse the mop in a bucket with clean water and replace the cleaning water frequently.

4. Continue, section by section, until the whole surface has been cleaned.

After treatment

1. After deep cleaning an oiled floor, it is necessary to re-apply a fresh coat of maintenance oil.

2. Prior to applying Bona Refresher or Freshen Up to a coated floor, the whole surface must be neutralized by cleaning the floor an additional time with clean water. Residues from the Deep Clean Solution may act on the newly applied refresher and prevent successful application.

Important notes

The information provided is prepared to the best of our current knowledge and makes no claim to be complete. The User is responsible for establishing that the product and recommendations herein are fit for the designated purpose, wood type and present situation before use.
