

Bona SuperSport Deep Clean

SPORTS FLOOR MAINTENANCE

Deep cleaning of wood & resilient sports flooring.

Bona SuperSport Deep Clean is designed for occasional cleaning of indoor sports floors to remove black heel marks, handball glue, etc. together with the build-up of body fats and other contaminants that may make the surface slippery.

- Safe on both wood & resilient surfaces
- Degreases the surface and restores slip resistance
- Effective against synthetic materials such as scuff marks from shoes
- Removes certain types of handball glue

Bona SuperSport Deep Clean

SPORTS FLOOR MAINTENANCE

Deep cleaning of wood & resilient sports flooring.

TECHNICAL DATA

Product type:	Surfactant solution
pH-value:	approx. 12.5 (concentrate) approx. 11 (diluted working solution)
Dilution:	Bona SuperSport Deep Clean: Water - 1 to 5 dilution (16.7%)
Safety:	Classified. Irritant - see Safety Data Sheet for more information.
Shelf life:	2 years from date of production, in unopened original container
Storage/transport:	Protect from freezing.
Disposal:	Waste and emptied containers should be handled in accordance with local regulations.
Pack size	5 litres

DIRECTIONS FOR USE

1. Dry clean the floor with a Bona Microfiber Dusting pad, scissor mop, etc. to remove all loose dirt
2. Apply the diluted product to a section of the floor using a mop, spray or auto scrubber, with no suction.
3. Allow the solution 3 - 5 minutes to dissolve the dirt. Scrub the section using a buffing machine or an auto scrubber, equipped with a white or red pad, and remove all the dissolved dirt.
4. Finally, use the auto scrubber, with clean water, to clean the floor and remove any remaining residues.

For spot cleaning of stubborn marks, increase the concentration to 1:2 (Bona SuperSport Deep Clean to water). Apply the solution to the affected area and allow 3-5 minutes for the solution to dissolve the dirt. Scrub the area with a buffing machine (e.g. Bona FlexiSand) and a red pad. Immediately remove the dissolved dirt with an auto scrubber or mop and bucket with clean water, before moving on to the next section.

After using Bona SuperSport Deep Clean at a high concentration it is recommended that the floor is allowed a minimum 2-3 hours drying time before resuming use.

Note: On wood floors, keep the amount of water used to a minimum. Pay attention to gaps in the floor; do not allow excessive amounts of cleaning solution to seep into open gaps.

Recommendations for Handball Glue

If handball glue is frequently used, plan for weekly deep cleaning, hardened handball glue will be more difficult to remove. Bona recommends using Select Profcare Handball Resin or other dispersion-based resins. This handball glue type is approved for use by players and is easier to remove than traditional glue (source: Team Denmark).

Large spills of hardened material may need to be removed mechanically using a spatula or similar; care must be taken not to damage the floor. The standard dilution (1:5) is usually effective on handball glue.

The information in this document and all other advice and recommendations that we provide to help and assist the applicator are based on previous experience and extensive testing but makes no claim to be complete. Because of the wide range of possible uses and conditions of application of our products, we do not relieve users from the need to carry out their own trials or to seek technical advice from Bona before use. Bona can only guarantee its products and not the construction as a whole. Observe recommendations from flooring manufacturers and the provisions of relevant standards.
